Proxy Server

Last Modified on 08.28.23

Application Manager supports proxy use. To set up a proxy, you'll first need to download the PsExec tool from Microsoft.

To set up the proxy:

- 1. Open a command prompt as an administrator.
- 2. Change the directory to the same as your PsExec.exe file (ex. cd C:\Temp).
- 3. Open your browser with a system account: PsExec.exe -i -s -d "c:\program files\<browser_name>\<browser>.exe".
- 4. Navigate to Internet Options > Connections > LAN Settings.
- 5. Set your proxy server address and port then click **OK**.
