RECAST SOFTWARE

Add a Service Connection

Last Modified on 03.18.24

Service connections are detected automatically during Recast Management Server installation. You can also add service connections in your Recast Management Server.

To add a service connection:

1. On the **Service Connections** page in the Recast Management Server interface, click **Add Service Connection**.

2. Select a connection **Type**: ActiveDirectory, MEMCM, MBAM, AzureActiveDirectory (Entra ID).

3. Name the new connection and add details associated with the connection type, such as the **Tenant ID**, **Client ID**, and **Client Secret** key.

4. Select a **Proxy Computer Name** and **Proxy User Name** from the drop-down lists.

5. Click the **Confirmed** check box to ensure that the service connection is available for use.

6. Click **Submit**.
